

# Litho Boost

## Controls:

**Volume** - Controls the output volume of the boost. Crank it to overdrive your tube amp.

**Tone** - Adjusts the high frequency content of the boosted signal. The "neutral" setting is around 2 o'clock.

**Contour** - Set low for transparent and glassy boost. Or set it higher for fat and juicy boost. Your call.

The Litho Boost is based on the classic Pharaoh Amplifiers Class-A Boost pedal. The Class-A Boost was one of the original boutique boost pedals, introduced back in 2001. Matthew Farrow hand built a few hundred in his garage, and they ended up all over the world.

From time to time, Class-A Boost pedals have made their way back to our shop and we've been floored by just how great they sound! The Litho Boost is a faithful recreation of the Class-A Boost Plus pedal, with wide ranging tone and contour controls. We hope you'll love it as much as we do.

The Litho Boost is based on one of the original boutique boost pedals, with hundreds of dedicated users across the world. We started with the tried-and-true circuit and then did absolutely nothing to it.

## Power Supply:

The Litho Boost requires a 9V DC power supply with a 2.1mm pin, center negative. The Litho Boost is not designed to be powered on supplies higher than 9V and does not use a battery. The Litho Boost should work fine on a multi-pedal "daisy chain" connector, but if you encounter excessive noise or hum try a separate power supply. The Litho Boost requires approx. 12mA.

# ALEXANDER

GREAT TONES. DOING GOOD.
